**EXCLUSIVE!** The new Vita-gro Bands are the only ones on the market scientifically treated with nutrients to stimulate rapid, well-balanced plant growth.

**PROTECTION!** Eliminates dangers of quick-drying days. Retains the moisture instead of drawing it off like a blotter or lamp wick.

**EFFICIENT!** Reduces frequency of watering about 50%. Maintains optimum moisture conditions. Virtually eliminates need of chemical feeding.

**QUICK!** Just set it up as you pick it up. A pinch—there it is. No locks, no slots, no wetting, no prying open.

**THRIFTY!** No breakage, no waste. A thousand bands bought means a thousand bands in use.

PERRY'S SPECIAL FLORISTS' STRAINS ARE ALWAYS DEPENDABLE.

## PERRY'S PRIZE WILT RESISTANT ASTERS

**WILT** most commonly occurs in the hot mid-Summer months just as the buds are beginning to open. The plant wilts, the leaves first turn yellow, then brown and curl, finally dying. The remedy is to use **Wilt Resistant Strains** that have proven so valuable to Florists that wherever available we offer them to the exclusion of others. The Aster "yellows" is quite a different disease that can best be avoided by growing your crop under cloth to prevent infestation by the insects spreading it. **UNLESS OTHERWISE NOTED, ALL OUR SEEDS ARE OF A WILT RESISTANT STRAIN.**

### Notes on Cuthbertson Type Sweet Peas.

A new class of exceptional vigor which comes into bloom just as the early type is beginning to shorten up.

Under glass successive plantings each two weeks apart from the first of November to February will furnish long-stemmed flowers until very hot weather sets in. Under glass they make a taller and more dense growth than the Early Flowering. Therefore, they should be spaced further apart in the row (about 5 in.) and plenty of head room allowed.

Out of doors they will bloom two weeks earlier than the Summer Flowering Spencers and continue to produce an abundance of large flowers on long stems well into the hot summer far surpassing the Early Flowering and Summer Flowering Spencers in vine growth and stem.
